B&M StarTek Starter

Ford, SB, 3/8" Depth

PART# 77101

DESCRIPTION

PERFORMANCE LITERALLY STARTS HERE. B&M's new StarTek Series of high performance starters have been designed and constructed to bring even the most extreme engine combinations to life. Running high compression? A blower? No problem. The new B&M Startek line up all feature 300 Amp motors, dual winding solenoids, 4.5:1 gear reduction, and high strength pinion gears. These components ensure every single volt of potential energy stored in your battery is converted to torque used to turn the crankshaft. All new B&M StarTek starters have billet aluminum mounting flanges, which on most applications allow the motor unit to be clocked in different positions for maximum clearance. Finally, in order to ensure the performance of our starters, B&M runs samples of all StarTek starters on our in house dyno, making sure they meet our strict quality standards.

Please call 707-544-4761 or visit www.bmracing.com for additional application and product information.

- * Billet Aluminum Mounting Flange
- * 4 Position Indexing for Optimum Position in Tight Clearance Applications
- * 4.5 : 1 Gear Reduction Ratio for Maximum Torque
- * High Performance 300Amp Motor
- * Ultra High Strength Pinion Gear
- * Designed for Higher Compression and Blown Engines
- * Dual Winding Solenoid for Lower Engagement Current Draw

JOBBER PRICE:
\$249.00

RETAIL PRICE:
\$332.00

SPECIFICATIONS:

UPC: 019695771010

DIMENSIONS:

7.25"H x 7.125"W x 10"L

WEIGHT: 10.35 lbs.
