- 2) Mark and drill a 5/8" hole in **heat shield(s)** 4 1/2" back from the forward most hole on the frame rail. (**NOTE:** Mark holes then hold hitch in position to check before drilling). Remove heat shields to drill hole.
- 3) Use supplied fishwire and "pull" the 7/16" carriage bolts and spacers through the access hole and into the existing hole in frame. Repeat for other side.
- 4) Re-install heat shields once the bolts are in position.
- 5) Raise hitch into position over vehicle tow loop and secure with 1/2" carriage bolt and flange nut as shown, finger tighten. (**NOTE:** Support hitch so receiver tube does not rotate and hit the bumper fascia.)
- 6) Rotate hitch straps to the frame rails, being careful not to push the bolt assemblies back into the frame and secure with 7/16" flange nuts.
- 7) Torque all 7/16" fasteners to 50 lb-ft and all 1/2" fasteners to 75 lb-ft.
- 8) Raise exhaust back into position and re-install rubber isolators.
