This product complies with safety specifications and requirements for connecting devices and towing systems of the state of New York, V.E.S.C.Regulation V-5 and SAE J684.

INSTALLATION WALKTHROUGH:

1. Remove the (3) fascia screws holding the rear plastic fascia to the bottom of the trunk pan. Retain (2) screws for reinstallation in Step (9) and return (1) screw to owner. **Note:** For 2016 models remove (2) inboard T-30 screws that retain exhaust tips (1) on each side, and remove exhaust tips.

2. Remove the spare tire from inside the trunk.

INSTALLATION WALKTHROUGH:

3. Remove the (2) rearmost rubber drain plugs from the bottom of the trunk pan and return to owner.
Note: To ease installation lower exhaust by removing (2) nuts using 10mm socket from the exhaust bracket (1) on each side.

4. Mark and trim rear fascia.
Note: For 2016 models use 10mm socket to remove (4) bolts (2) on each side and remove (2) fascia brackets (1) on each side from vehicle and trim for clearance as shown.
Note: Dimensions are approximate, confirm fit prior to trimming.

5. Reattach trimmed fascia brackets. Gently flex the rear fascia and place nut plates on top of the bumper beam supports.

6. Raise hitch into position, aligning the slots in the hitch with the holes in the nut plates. Loosely secure the hitch into position using (4) 1/2-13 x 5" hex bolts and 1/2" conical toothed washers (2) each side.

INSTALLATION WALKTHROUGH:

7. Seal the drain holes in the trunk pan with silicone caulk. Insert a SP62 spacer and 1/2-13 x 1 1/2" carriage bolt into each of the drain holes and secure from below with 1/2" hex flange nut.

8. Torque all 1/2-13 x 5" hex bolts to 75 ft-lbs. Torque all remaining 1/2" hardware to 110 ft-lbs. Return the spare tire to the trunk.

9. Reinstall the (2) outer screws through the bumper fascia and into the trunk pan.

TOWING SAFETY INFORMATION

Gross Trailer Weight / GTW

The Gross Trailer Weight is the weight of the trailer & cargo. Measure this by putting the fully loaded trailer on a vehicle scale.

Tongue Weight / TW

The downward force that is exerted on the hitch ball by the coupler. The tongue weight will vary depending on where the load is positioned in relationship to the trailer axle(s). To measure the tongue weight, use either a commercial scale or a bathroom scale with the coupler at towing height. When using a bathroom scale with heavier tongue weights, use the method shown and multiply the scale reading by 3.

Weight Carrying / WC

The total weight of both the trailer and the cargo inside. Never exceed the weight capacity of your trailer hitch.

Weight Distribution / WD

Used to balance the weight of the cargo between the front and rear wheels throughout the trailer, allowing for better steering, braking, and level riding.

Sway Control

A device used to reduce the lateral movements of the trailer that are caused by the wind. This works in conjunction with a weight distribution hitch. Do not use this on a class 1 or 2 hitch, or with surge brakes.

How Much Can You Safely Tow?

TONGUE WEIGHT ¹ lbs	TRAILER CLASS									
	CLASS 1	CLASS 2	CLASS 3	CLASS 4	CLASS 5	CLASS 6	CLASS 7	CLASS 8	CLASS 9	CLASS 10
1000	1100	1200	1300	1400	1500	1600

3000										
4000										
5000										
6000										
7000										
8000										
9000										
10000										

Refer to owner's manual for towing capabilities and limitations.

Ball Mount

The ball mount is placed inside the opening of the receiver hitch which is mounted to the vehicle. Make sure a hitch pin and clip is properly securing the ball mount to the receiver hitch before you begin towing.

• A: Rise. B: Drop. C: Hole Size. D: Length.

Trailer Ball

The connection from the hitch to the trailer. There are many factors that determine the correct hitch ball:

- Number one is the hitch ball's gross trailer weight rating.
- The mounting platform must be at least 3/8" thick.
- The hole diameter must not be more than 1/16" larger than the threaded shank.
- Every time you tow, check the nut and lock washer to make sure they are fastened securely.

• A: Ball Dia. B: Shank Dia. C: Shank Length. D: Shank Rise.

Coupler

The component that is placed over the trailer ball to connect the vehicle to the trailer. Be sure that the coupler size matches the size of the hitch ball and that the coupler handle is securely fastened. To determine what size hitch ball you need for your application you will need to know the size of coupler that is on the trailer. Be sure your coupler is properly adjusted to the ball you are using.

NOTE: For added security the use of safety devices such as Coupler Safety Pins and Locks is strongly recommended.

Safety Chains

Safety chains are a requirement and should be crossed under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch. Always leave enough slack so you can turn. Never allow the safety chains to drag on the ground and never attach the chains to the bumper.

Trailer Classification: Safety Chain Breaking Force - Minimum

Class 1: 2,000 lbs. (8.9 kN)

Class 2: 3,500 lbs. (15.6 kN)

Class 3: 5,000 lbs. (22.2 kN)

The strength rating of each length of safety chain or its equivalent and its attachments shall be equal to or exceed in minimum breaking force the GVWR (Gross Vehicle Weight Rating) of the trailer.

Electrical

Trailer lights, Electric Brakes, Break-away systems - Every time you tow, be sure to check that all components are working properly.
