Installation Instructions

Product: **B1 Body Lift™**

Part Number: **PN 9902**

Application: **CJ5 & CJ7, 1976-86**

Welcome

CONGRATULATIONS on purchasing a new B1 Body Lift from JKS Manufacturing. We are committed to providing you with the best products available and your satisfaction is our first priority.

PLEASE READ these Installation Instructions carefully, and save them for future reference, as they contain important installation and maintenance information.

Important

BODY LIFT MUST BE INSTALLED on one side of vehicle at a time.

Tools Required

- Metric/Standard Socket Wrench Set
- Torque Wrench
- Tape Measure
- Medium Strength Threadlocker
- Hydraulic Floor Jack
- Sturdy Block of Wood (to protect body)
- Center Punch and Hammer
- 3/8" Drill Bit
- 1/8" Drill Bit or Torch * (for removing plastic rivets in steering slip shaft)
- Reciprocating Saw or Die Grinder with Cut-Off Wheel * (for trimming fan shroud)
- Wire Brush *
- Factory Service Manual (recommended)

** Asterisk denotes tools that are not required for some applications. Thoroughly read instructions first to determine which tools will be required for your application.*

Parts

	DESCRIPTION	QTY
A	Dura-Thane™ Body Puck	11
B	3/8" x 3-1/2" Bolt	6
C	3/8" x 4" Bolt	2
D	3/8" Flat Washer	8
E	7/16" x 4" Bolt	3
F	7/16" Flat Washer	3

Installation

❑ 1. UNBOLT FAN SHROUD

- Remove the four bolts holding the plastic fan shroud and radiator to the vehicle. Use the bolts to temporarily support the radiator, and remove fan shroud from vehicle.

❑ 2. LOOSEN BODY MOUNTS

- Locate all eleven body mount bolts on vehicle. Refer to the BODY MOUNT LOCATION DIAGRAM for assistance.
- Loosen each body mount bolt, but DO NOT REMOVE until instructed.
- Remove the bolt from body mount ① located beneath the grill.
- Remove the bolts from body mounts ②, ③, ④, ⑤, and ⑥ on DRIVER SIDE of vehicle only.
HINT: Body mount ⑤ is located between fuel tank and rear axle.

3. INSERT BODY PUCKS

- Position a hydraulic jack next to body mount ③ on DRIVER SIDE of vehicle.
- Place a sturdy wooden block between the hydraulic jack pad and channel portion of vehicle body for protection.
- Carefully raise the vehicle body just enough to insert the 1.25" Body Pucks (A) between body and factory body mounts ②, ③, ④, ⑤, and ⑥.
HINT: Recessed bottom of Body Pucks must encapsulate factory body mounts.
- With Body Pucks (A) inserted, slowly lower the vehicle body onto mounts, ensuring correct alignment of body on chassis.
- Apply medium strength thread locking compound to three of the supplied 3/8" x 3-1/2" Bolts (B), one of the 3/8" x 4" Bolts (C), and one of the 7/16" x 4" Bolts (E).
- Insert the 3/8" x 3-1/2" Bolts (B) with 3/8" Flat Washers (D) into body mount positions ③, ④, and ⑤. Insert the 3/8" x 4" Bolt (C) with 3/8" Flat Washer (D) into body mount position ②. Insert the 7/16" x 4" Bolt (E) with 7/16" Flat Washer (F) into body mount position ⑥. Start threads but DO NOT TIGHTEN bolts until instructed.
- Repeat this procedure with body mounts ②, ③, ④, ⑤, and ⑥ on the PASSENGER SIDE of vehicle.
- Insert the last remaining Body Puck (A) at body mount ① located beneath the grill.
- Apply medium strength thread locking compound to the last remaining 7/16" x 4" Bolt (E) and insert with a 7/16" Flat Washer (F) into body mount position ①.
- Using a torque wrench, tighten all 3/8" and 7/16" Bolts (B, C and E) to 30-35 ft-lbs.
HINT: Use care when tightening bolts to avoid crushing factory rubber body mounts.

BODY MOUNT LOCATION DIAGRAM

4. MODIFY FAN SHROUD

- Locate the four mounting holes on the plastic fan shroud.
- Measure exactly 1" above the factory mounting holes and mark the location with a center punch.
- Drill a new 3/8" hole through all four center punched marks. **HINT:** Grind away any plastic reinforcement webbing that interferes with re-installation of mounting bolts.
- Test fit the fan shroud to the radiator by aligning with the new mounting holes.

- Check for interference between the fan shroud and radiator hoses, fan blades, or any other objects. If necessary, trim the fan shroud until it completely clears any interferences.
- Secure the fan shroud and radiator to the vehicle with the original four mounting bolts.

5. CHECK T-CASE OPERATION

- Check operation of the shift lever to ensure the transfer case fully engages all ranges.
HINT: If necessary, adjust linkage between shift lever and bell crank. If interference is experienced, it may be necessary to trim the floor to provide sufficient shift lever clearance.

6. CHECK FOR STEERING BIND

- Drive vehicle a short distance while checking for binding in the steering wheel. If no steering bind exists, skip this section and proceed to step 7.
- If steering bind exists, remove the steering slip shaft from the vehicle and locate the two plastic rivets that prevent it from slipping.
- Remove the two plastic rivets by drilling through them with a 1/8" drill bit. **HINT:** Alternatively, the plastic rivets may also be removed by heating them with a torch until they melt out.
- Use a wire brush to clean the area, and re-install the steering slip shaft assembly to vehicle.

7. POST-INSTALLATION

- Check all mounting hardware to ensure it has been correctly installed and tightened to factory torque specifications.
- Check torque specifications for all mounting hardware after driving vehicle 50 miles, and after first time off-road.

Maintenance

Check all torque specifications as part of regular vehicle maintenance schedule.
