ALL VEHICLES

1

MERCEDES: Slide the **Locking Tabs** onto the guides located on the front corners of the **Snap-in Bracket**.

2

Slide the aftermarket head unit into the **Snap-in Bracket**. If the shafts of the head unit do not pass easily through the kit, cut and remove the upper-shaft tabs from the shaft openings. ("A")

3

If the upper-shaft tabs were removed in step #2, attach the **Faceplate** and **Shaft Masks (for upper-shaft locations)** to the **Snap-in Bracket**. Slide the aftermarket head unit into the kit and secure with shaft nuts. (see Fig. A)

If the upper-shaft tabs were **NOT** removed in step #2, attach the **Faceplate** to the **Snap-in Bracket**. Slide the DIN cage into the kit and secure by bending the metal locking tabs down. Slide the aftermarket head unit into the cage until secure. (see Fig. B)

4

- A) Strip wire ends back $\frac{1}{2}$ "
- B) Twist ends together
- C) Solder
- D) Tape

Locate the factory wiring harness in the dash. Metra recommends using the proper mating adaptor and making connections as shown. (Isolate and individually tape off the ends of any unused wires to prevent electrical short circuit).

5

Re-connect the battery terminal and test the unit for proper operation. Snap the head unit/kit assembly into the sub-dash.
