3 PC CNC PLATINUM SERIES BILLET GRILLE

Recommended Tools:

3/32 Allen Wrench
3/8 Wrench or Nut Driver

Parts List / Hardware:

3 Billet Inserts
12 10-32 x 1.5" Threaded Studs
12 10-32 Nylon Lock Nuts
12 1.25 Hook Brackets

Read and understand instructions before attempting installation

Step 1

Remove the grille shell from the vehicle. Unclip the plastic shrouds from the outer openings. Use a heat gun or hair dryer to remove the OE logo from the factory grille. Take the billets and thread the studs into the holes on the back of the billets. Use a 3/32 Allen wrench to snug the studs in place. **BE SURE NOT OVERTIGHTEN THE STUDS** (over-tightening can cause dimpling to the face of the billets).

Step 2

Center the billets into the openings of the grille shell. Install the hook brackets onto the mounting studs. Thread a Nylon lock nut onto each stud. Make sure the hook end of the brackets wrap around the mesh openings. Tighten the nuts until the billets are held firmly in place.

Step 3

Re-fasten the plastic shrouds on the outer openings. Install the grille assembly back onto the vehicle. Installation is now complete. ***Thank you for purchasing your T-Rex billet grille. 2/21/05***
