TECHNIQUE**

ATTACH FISHWIRE TO CARRIAGE BOLT AND SLIDE SPACER ONTO FISHWIRE. PUSH THE BOLT THRU THE HOLE FOLLOWED BY THE SPACER (AS SHOWN). PULL BOLT BACK INTO POSITION, PROTRUDING FROM THE FRAME.

**RUBBER ISOLATOR
REMOVAL DIAGRAM**

This technique can be used if an Exhaust Hanger Removal Pliers is not available.

Using a 5/8" open end wrench, slide the wrench up to the rubber isolator, cradling the hanger rod as shown. Next place the flat edge of a pry bar between the wrench and the hanger stop or hanger rod. Then simply rotate the pry bar toward the wrench to remove the rubber isolator.

Note: Using a spray lubricant or soapy water on the hanger rod and the rubber isolator helps removal.

INSTALLATION STEPS

1. If present, remove (10) fasteners and lower underbody panel.
2. Lower exhaust by removing rubber isolators from muffler hangers. (See Rubber Isolator Removal Diagram.)
3. Mark and trim underbody panel. **Note:** Dimensions are approximate, confirm fit prior to trimming. Use ribs of the underbody panel as cutting guides. (See underbody panel trim diagram)
4. Enlarge existing hole in both frame rails to allow access for 1.00 X 3.00 spacers to be inserted as shown above.
5. Reverse fishwire carriage bolts and blocks into frame rails.
6. Raise hitch into position. If underbody panel is present you will need to raise it with the hitch.
7. Loosely install tow hook attachment bolt and spacers.
8. Level hitch and install tow loop attachment fasteners and tighten. This must be done to prevent the receiver tube from angling up when other fasteners are tightened.
9. Loosely install hex flange nuts.
10. Torque all 7/16" hardware to 70 lb-ft. Torque all 1/2" hardware to 110 lb-ft.
11. If present, reattach underbody panel using fasteners removed in Step (1)
12. Raise exhaust back into position and re-install rubber isolators removed in Step 1.
