INSTALLATION STEPS

- On models with dual exhaust pipes or exhaust hangers at the Energy Absorber (E.A.) units, lower the mufflers and tail pipes. Support muffler assembly with a wire or jack to prevent excess travel which could be damaging to the exhaust system.
 - Remove the bottom outboard E.A. bolt and inboard E.A. bolt from both sides. Return the bolts to the vehicle owner.
 - Fishwire a CM-SP10 spacer and 1/2-13 carriage bolt through the access hole on the inside of the frame rail into the third slot from the end of the frame rail on both sides. Leave fishwires attached. (See Fishwire Technique.)
 - Raise the hitch into position between the E.A. unit and the exhaust hanger (if present) and install the 5/16" hex bolts, washers and flange nuts as shown. Feed the 1/2" fishwires through the slots in the mounting strap, taking care not to push the carriage bolts into the frame rails.
- Note: Bend the trunk pan tabs as shown to eliminate interference. (See Trunk Pan Modification.)
- Remove the fishwires from the 1/2" carriage bolts in the frame rails and secure the hitch to the frame rails with 1/2" hex flange nuts as shown.
 - Torque all 5/16" hardware to 24 ft-lbs. Torque all 1/2" hardware to 110 ft-lbs.
 - Reattach the muffler and tail pipes if lowered in Step 1.

PERIODICALLY CHECK THIS RECEIVER HITCH TO ENSURE THAT ALL FASTENERS ARE TIGHT AND THAT ALL STRUCTURAL COMPONENTS ARE SOUND.
