1. Lower exhaust by removing (3) rubber isolators from the exhaust towards the rear of the vehicle. Remove (5) fasteners from lower fascia.

2. Fishwire (2) 7/16" carriage bolts and (2) CM-SP2 spacers through the vehicle access holes to the attachment holes on each side. See FISHWIRE DIAGRAM below.

## INSTALLATION WALKTHROUGH:

3. Trim lower fascia as shown in FASCIA TRIM DIAGRAM below.  
**CAUTION:** Be aware of electrical components when trimming.  
**NOTE:** Trimming of underbody panel may ease installation.

4. Raise hitch into position feeding the fishwires through the holes in the hitch. Once hitch is in place, remove the fishwires and loosely secure (2) 7/16" hex flange nuts on each side. Secure Tow Loop Plate to recovery loop using (1) 1/2" bolt, (1) CM-SP16 spacer and (1) 1/2" hex flange nut.

5. Torque all 7/16" hardware to 59 ft-lbs and all 1/2" hardware to 110 ft-lbs. Reinstall items removed in Steps 1.

## TOWING SAFETY INFORMATION

### Gross Trailer Weight / GTW

The Gross Trailer Weight is the weight of the trailer & cargo. Measure this by putting the fully loaded trailer on a vehicle scale.

### Tongue Weight / TW

The downward force that is exerted on the hitch ball by the coupler. The tongue weight will vary depending on where the load is positioned in relationship to the trailer axle(s). To measure the tongue weight, use either a commercial scale or a bathroom scale with the coupler at towing height. When using a bathroom scale with heavier tongue weights, use the method shown and multiply the scale reading by 3.

### Weight Carrying / WC

The total weight of both the trailer and the cargo inside. Never exceed the weight capacity of your trailer hitch.

### Weight Distribution / WD

Used to balance the weight of the cargo between the front and rear wheels throughout the trailer, allowing for better steering, braking, and level riding.

### Sway Control

A device used to reduce the lateral movements of the trailer that are caused by the wind. This works in conjunction with a weight distribution hitch. Do not use this on a class 1 or 2 hitch, or with surge brakes.

### How Much Can You Safely Tow?

| TONGUE WEIGHT   | 1000 | 2000 | 3000 | 4000 | 5000 | 6000 | 7000 | 8000 | 10,000 | 12,000 |

Refer to owner's manual for towing capabilities and limitations.

### Ball Mount

The ball mount is placed inside the opening of the receiver hitch which is mounted to the vehicle. Make sure a hitch pin and clip is properly securing the ball mount to the receiver hitch before you begin towing.

- A: Rise. B: Drop. C: Hole Size. D: Length.

### Trailer Ball

The connection from the hitch to the trailer. There are many factors that determine the correct hitch ball:

- Number one is the hitch ball's gross trailer weight rating.
- The mounting platform must be at least 3/8" thick.
- The hole diameter must not be more than 1/16" larger than the threaded shank.
- Every time you tow, check the nut and lock washer to make sure they are fastened securely.
- A: Ball Dia. B: Shank Length. C: Shank Dia. D: Shank Rise.

### Coupler

The component that is placed over the trailer ball to connect the vehicle to the trailer. Be sure that the coupler size matches the size of the hitch ball and that the coupler handle is securely fastened. To determine what size hitch ball you need for your application you will need to know the size of coupler that is on the trailer. Be sure your coupler is properly adjusted to the ball you are using.

NOTE: For added security the use of safety devices such as Coupler Safety Pins and Locks is strongly recommended.

### Safety Chains

Safety chains are a requirement and should be crossed under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch. Always leave enough slack so you can turn. Never allow the safety chains to drag on the ground and never attach the chains to the bumper.

Trailer Classification: Safety Chain Breaking Force - Minimum

Class 1: 2,000 lbs. (8.9 kN)

Class 2: 3,500 lbs. (15.6 kN)

Class 3: 5,000 lbs. (22.2 kN)

The strength rating of each length of safety chain or its equivalent and its attachments shall be equal to or exceed in minimum breaking force the GVWR (Gross Vehicle Weight Rating) of the trailer.

### Electrical

Trailer lights, Electric Brakes, Break-away systems - Every time you tow, be sure to check that all components are working properly.

RUBBER ISOLATOR  
REMOVAL DIAGRAM

This technique can be used if an Exhaust Hanger Removal Pliers is not available.

Using a 5/8" open end wrench, slide the wrench up to the rubber isolator, cradling the hanger rod as shown. Next place the flat edge of a pry bar between the wrench and the hanger stop or hanger rod. Then simply rotate the pry bar toward the wrench to remove the rubber isolator.

Note: Using a spray lubricant or soapy water on the hanger rod and the rubber isolator helps removal.

FASCIA TRIM DIAGRAM

## INSTALLATION STEPS

1. Lower exhaust by removing (3) rubber isolators from the exhaust towards the rear of the vehicle. Remove (5) clips from lower fascia.
2. Fishwire (2) 7/16" carriage bolts and (2) CM-SP2 spacers through the vehicle access hole to the attachment holes on each side. (See fishwire diagram)
3. Trim lower fascia as shown in FASCIA TRIM DIAGRAM. **CAUTION:** Be aware of electrical components when trimming. NOTE: Trimming underbody panel may ease installation.
4. Raise hitch into position feeding the fishwires through the holes in the hitch. Once hitch is in place, remove the fishwires and loosely secure (2) 7/16" hex flange nuts on each side. Secure Tow Loop Plate to recovery loop using (1) 1/2" bolt, (1) CM-SP16 spacer, and (1) 1/2" hex flange nut.
5. Torque all 7/16" hardware to 59 ft-lbs and all 1/2" hardware to 110 ft-lbs. Reinstall items removed in Step 1.
