

43705 - Vehicle Wiring Installation Instructions

Nissan Cube 2009 - 2013

1. Open the rear hatch. Remove two plastic fasteners holding the black plastic threshold cover in place. Remove threshold cover being sure not to damage alignment tabs. Under threshold cover locate two square tabs and using a flat head screwdriver align tabs with the hole to remove Cube reflector. On each side of the vehicle remove a 10 mm bolt holding the taillights in place. Remove the taillights to locate the vehicles taillight wiring harness. The harness will have connectors similar to those on the Hopkins® T-connector harness.
2. On the drivers side separate the connectors being sure not to damage the locking tabs. Insert the Hopkins® T-connector end with the yellow wire in-between the separated connectors. Make sure the connectors are fully inserted with locking tabs in place.
3. Route the Hopkins® T-connector end with the green wire across to the passenger side on the top side of the bumper and behind the center bracket. Repeat step 2 on the passenger side using the green wire.
4. Locate a suitable position on the vehicle frame close to the connector to attach the converter's white wire with the ring terminal. Drill a 3/32" hole and attach the white wire to the vehicle using the screw (provided). Caution: Do not drill into any exposed surfaces or through the vehicle body exterior.
5. On the driver's side, secure the converter module in the taillight area using ny-ties (provided).
6. Route the 4-flat wire down thru the opening under the taillight assembly. Under the vehicle route the 4- flat wire to the receiver hitch and secure with ny-ties (provided).
7. Re-install the plastic threshold and any parts removed during installation.
8. Attach the 4-way flat dust cover (provided) to the 4-way flat connector.
9. Apply a small amount of grease (provided) to the 4-way flat terminals to prevent corrosion.
10. Plug completed wire harness into the trailer 4-way flat connector.
11. Test all functions with the engine running to ensure proper operation.

TIPS:

Grease applied to the trailer wiring terminals on a regular basis will help prevent corrosion.

A heavy duty flasher may be required to eliminate rapid flashing.

Always unplug boat trailer connector before backing trailer into the water.
