

This crank pulley was designed to work on either SFI or OE balancers on either SBC or BBC engines. The pulley is mounted with the thicker edge of the pulley towards the balancer.

Thicker edge of pulley goes against balancer.

If using an SFI balancer, the pulley will locate on the balancer using the 4.75" locating ring on the pulley.

If using an OE balancer, the pulley will locate using the supplied bushing [either SBC or BBC]. The bushing fits in center opening of pulley, on the thicker edge of the pulley, with the locating ring facing out.
